

ACTIVITY: Define the follow terms and answer the following questions on loose leaf using pages 40 to 42 of your textbook.

1. Define:

- a.** population distribution
- b.** archipelago effect
- c.** population density

2. Look at figures 3.1 and 3.2 Identify at least two patterns of population distribution that you notice.

3. How is population density measured?

4. Calculate the population density: There are 7200 people living in 8 square kilometres. How many are there in 1 square kilometre?

5. Look at figure 3.3 Review the legend.

- a.** Identify at least two patterns of population density that you notice on the map.
- b.** Look at NS. Where is the population the densest?
- c.** What category (look at color) makes up most of NS?
